

Fiero to Ferrari F-355 Project

Starting with the basic Fiero donor

Almost too pretty to cut up

Rough Body kit installed

Corvette taillight wiring added.

Kit was originally designed for a convertible model, but we have seen a lot of them that remain “topless.” We decide to leave the Fiero hardtop and sunroof.

Wider deep-set wheels will be needed. We have a set of 15" X 8" for the front, and 15" X 10" for the back that will be installed

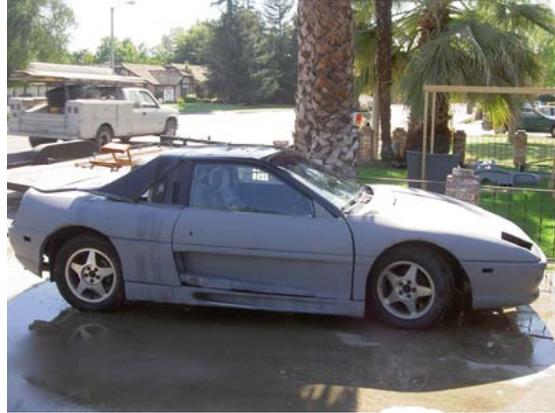

Starting to cleanup the body and touchup with grey primer

Looking at options to do rear roofline

Roofline is just not quite right with the Fiero rear hatch

We purchase a Fiero GT hatch, which we cut up and mold into the body kit.
