User guide for OSX

Share photo's, notes, contacts
and more with a simple flick
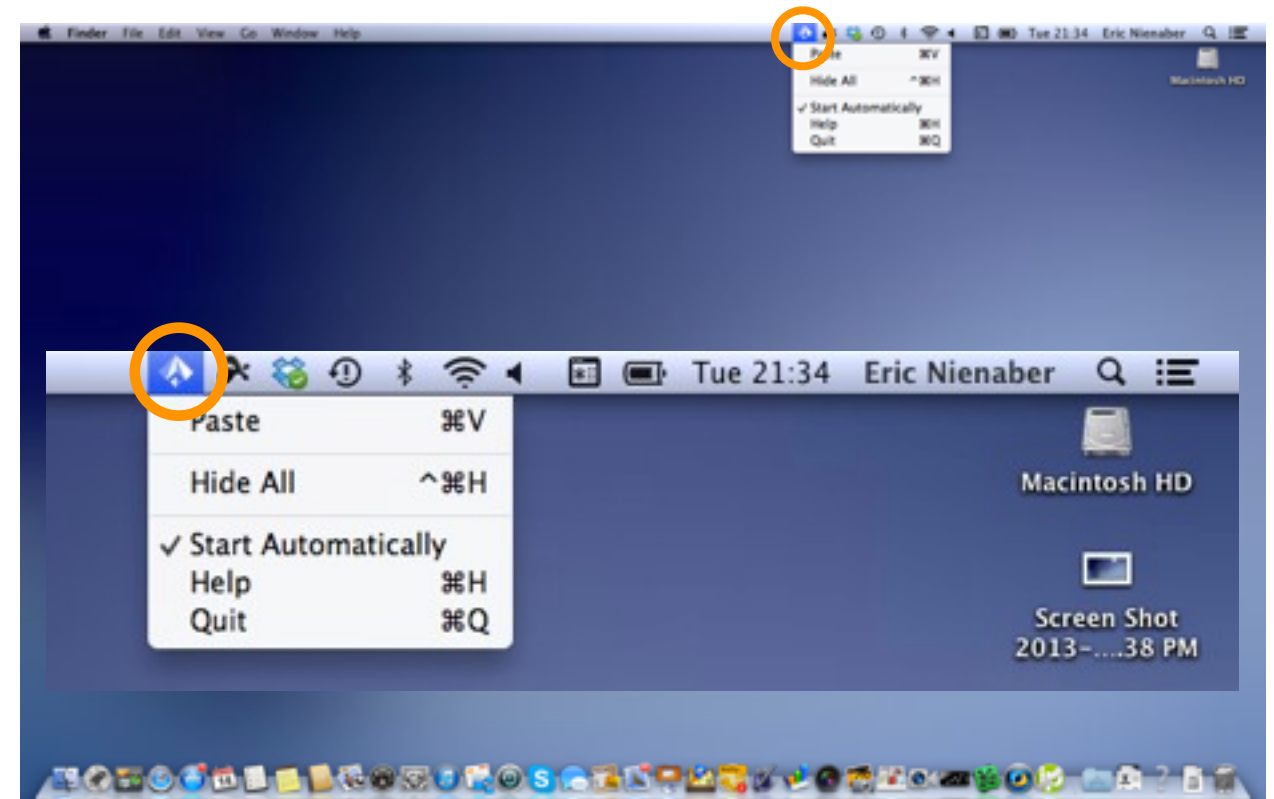

Flick

Just flick images and documents between devices

Flick between iOS and OSX devices

Flick between iOS devices

Flick between OSX devices

Flick to/from Windows devices

Flick to/from Windows devices

Installing Flick

After downloading Flick from the App store it will automatically be installed. To run the app go to your launch pad and open the app. Upon opening the app a new icon will appear in the status bar at the top of your screen. Flick is now running. You are now ready to Flick documents to other devices and your computer will show up as available to other devices running the app. To set flick to open automatically, click the flick icon and select Start Automatically.

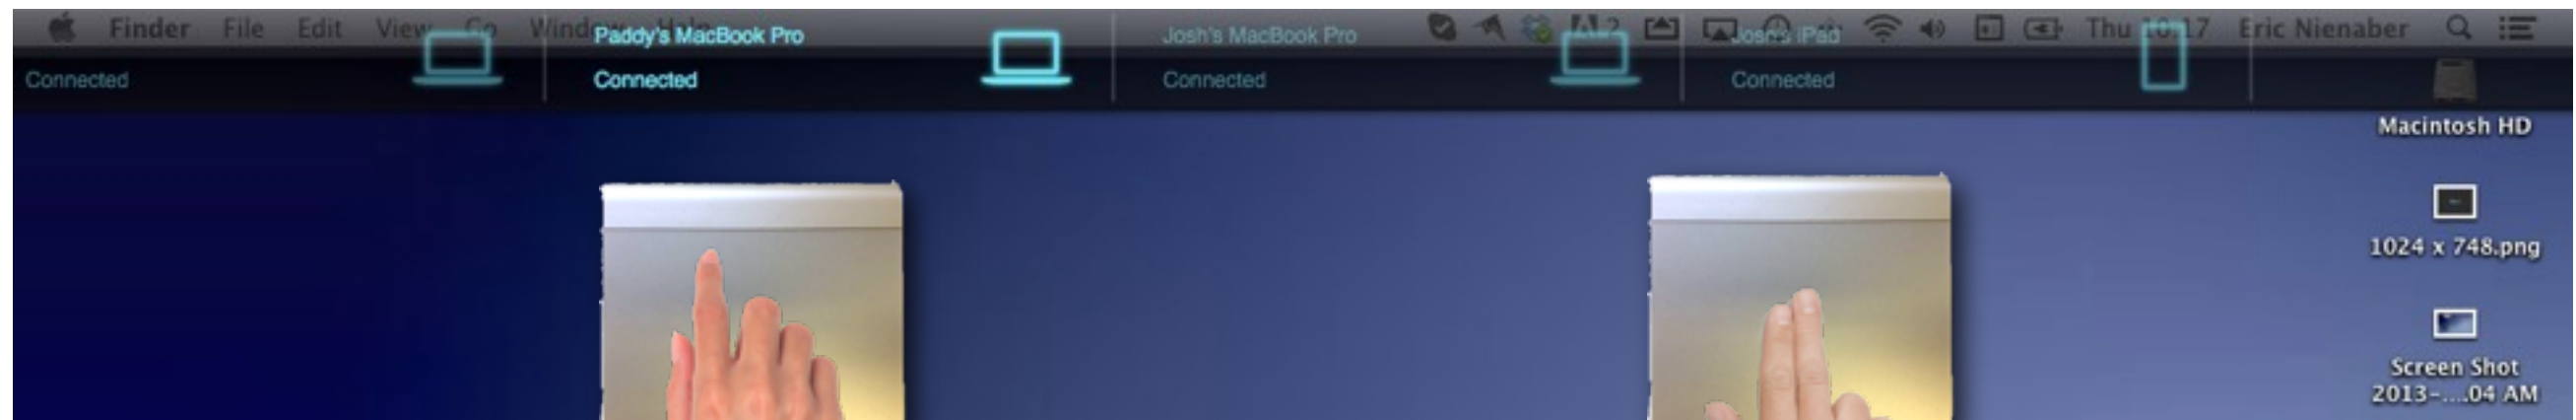

It is unobtrusive. After installing the only thing that is visible is the small icon in the status bar.

Start Flicking

Grab and drag any file to the top of the status bar. The cursor reveals a **+** sign. Release the file and it is placed on your **flicktop**. The flicktop is a layer that resides on top of everything else happening on your Mac. To show or hide the flicktop press **ctrl + cmd + h**
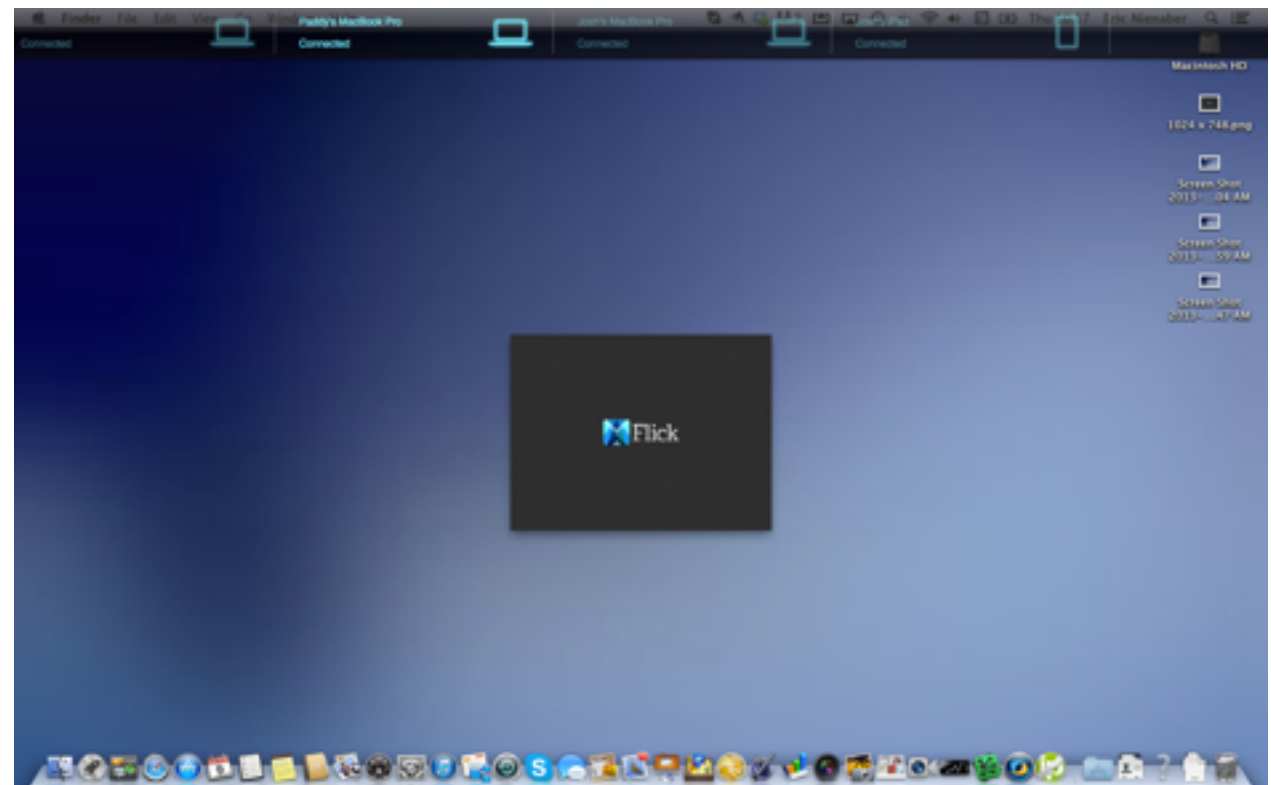

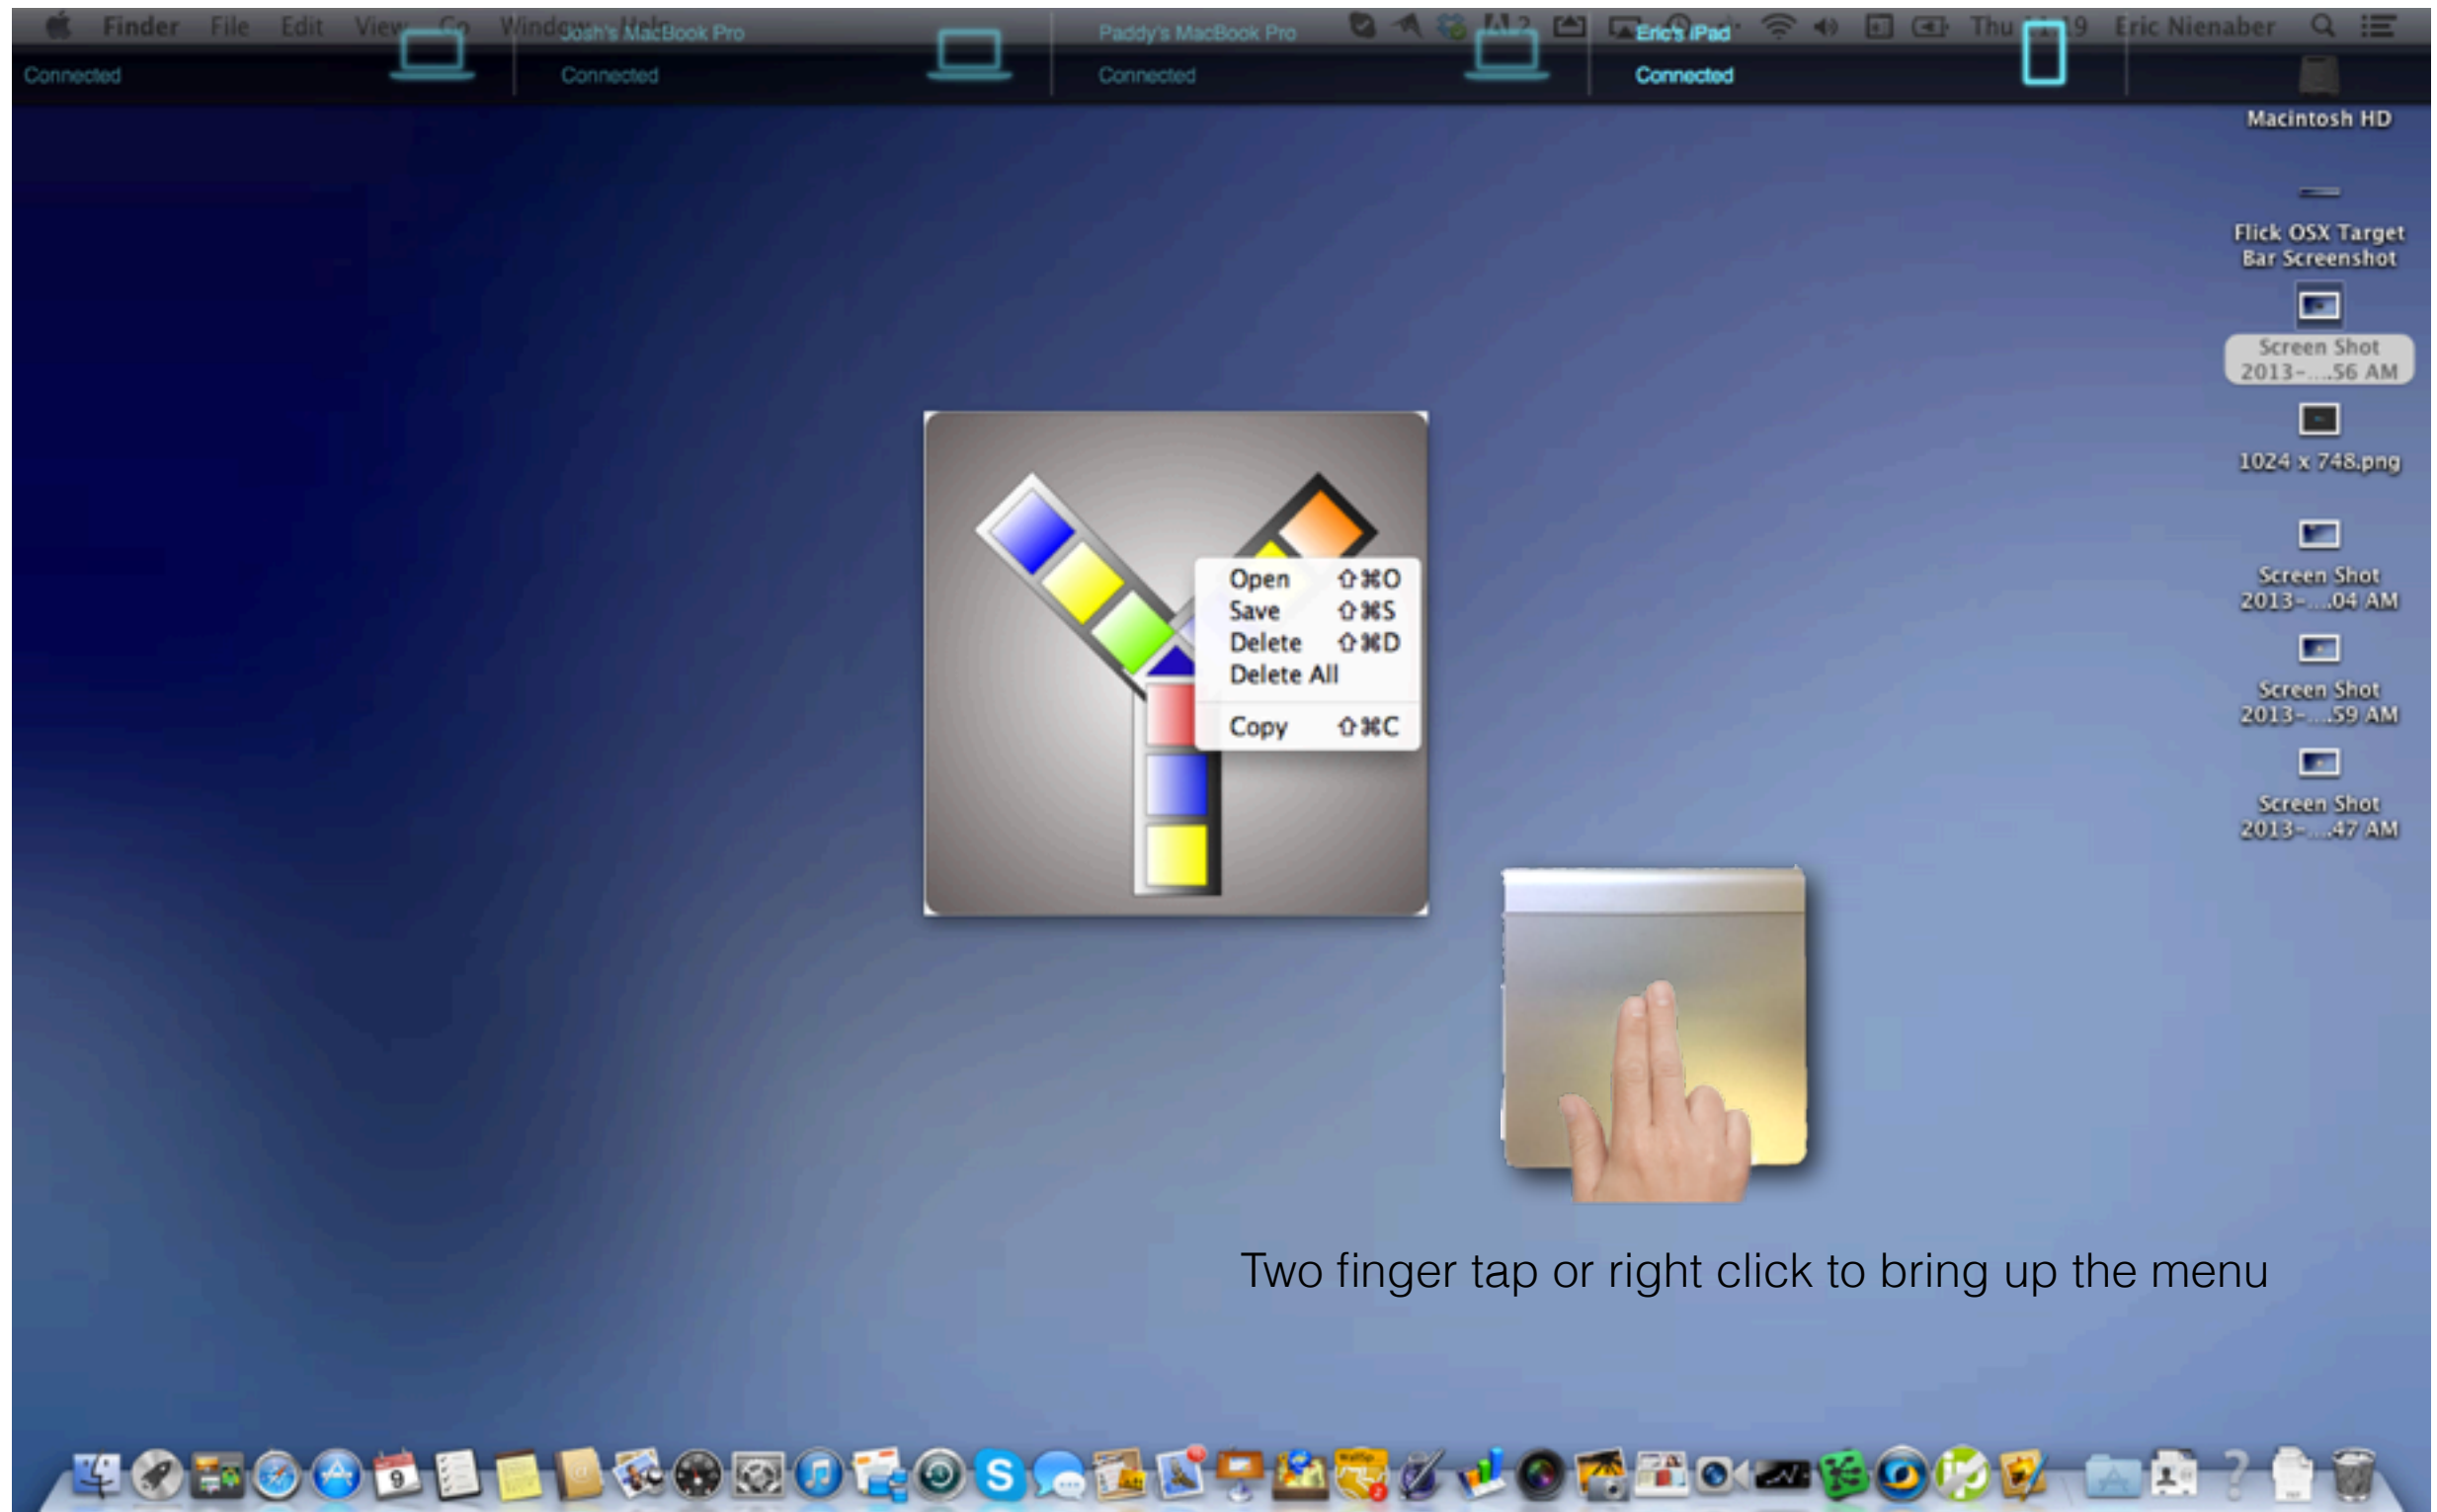

The target bar

Tap to select target

Two finger drag to scroll target bar

Grab image and flick!

When files arrive...

Two finger tap or right click to bring up the menu

Some key points

- The flicktop will remain active until all items have either been saved or deleted.

- To place an item on the flicktop for flicking drag a file from finder, desktop or file icon on top of the document (local files only) and release after the + appears.

- Select a target to send to by tapping

- Scroll the target bar by two finger swipe gesture

- To hide/show the flicktop press **ctrl + cmd + h**
